STARTING CONTROLLERS
QK101

QK101 Series starting controller for single phase motor

TECHNICAL DATA:

- **Single phase motor starting controller**

Single phase capacitor operating motor is equipped with an external capacitor and a over-load protector in the starting controller which can automatically break down power supply (manual recover) when motor over-loading.

QK 1 0 1 – 0.37
- 0.37 — Motor power(kW)
- 1 — Design number
- 0 — Manual controller
- 1 — Single phase
- QK — QK Series controller

- **Suitable application range**

–Type of motor: Single phase motor
–Motor power: **0.18–1.5kW**
–Voltage: 220–240V~
–Frequency: 50Hz

- **Product functions**

–Protect against short circuit
–Protect against over current

- **Operating method**

–Manual control

- **Installation environment index**

-Grade of protection: IP20
-Environment temperature: –25℃–+55℃
-Environment humidity: (20–90)%RH

- If it used the star-delta connection to start the motor that the current will reduce $\sqrt{3}$ (1 x 0.58), so the length of cable can increase $\sqrt{3}$ (1 x 1.73 than the data in table.
- For example in fact the current of submersible pump is lower than the load current 10%, the length of cable can be longer 10% than the data in table.
- In order to reduce operating loss as far as possible, selected the cross section can much increase than the data in table. Especially for the condition which operating voltage is lower than the rated voltage.
